

Bernite CL 20

Acid Flux Cleaner

Bernite CL 20 will quickly and effectively neutralize acid fluxes on both ferrous and nonferrous metals in a soldering procedure. It will dissolve and solubilize all residues and leave a clean metal joint that can be ultimately plated or painted. It will not discolor the soldering alloy and will prevent the development of greenish copper oxides.

Operating Conditions

Bernite CL 20 is supplied as a water soluble solution that is used at room temperature. Soldered joints can be immersed in a solution of Bernite CL 20 or if this is not practical the Bernite CL 20 can be washed or brushed onto the joint area. Rinsing this solution off is not mandatory in that it will not adversely affect the metal or the joint.
